

Amoeba Sisters Video Recap: Mitosis

1. Mitosis is done by your body cells. What types of cells do **NOT** undergo mitosis?

2. Describe 2 ways that mitosis is important for your body.

- _____
- _____

3. This illustration is trying to demonstrate something that mitosis is not. In mitosis, the cells that are created are:

4. Mitosis is just one small part of the cell cycle! Describe what would occur if cells were in mitosis more than they were in interphase.

5. When cells are dividing, it is important to understand that they have to move chromosomes equally to both cells. Based on this illustration, describe what a chromosome is made of.

6. Mitosis starts and ends with diploid cells. That means they have two sets of chromosomes (both parents each contribute a set). In humans, how many chromosomes should be in each of these diploid cells after mitosis?

Amoeba Sisters Video Recap: Mitosis

Sketch the Mitotic Stages

Directions: We encourage you to be creative with a cartoon illustration of your own for each phase. Label the chromosomes, spindles, and nucleus (if applicable).

Prophase

Metaphase

Anaphase

Telophase
